

CARBON FOOTPRINT

... IS THE AMOUNT OF EMITTED GREENHOUSE GASES. CARBON FOOTPRINT MAY INVOLVE AN INDIVIDUAL, PRODUCT OR EVENT. BUT IT IS MOST OFTEN USED IN CONNECTION WITH THE PRODUCTS AND DEFINES THE AMOUNT OF ALL GREENHOUSE GASES, WHICH WERE RELEASED IN THE MANUFACTURE OF A PARTICULAR PRODUCT. SIMILAR PRODUCT CHARACTERISTICS IS USED TO SELECT THE PRODUCT WHOSE PRODUCTION HAS MINIMAL IMPACT ON THE ENVIRONMENT. THESE ARE INDICATORS OF ENVIRONMENTAL BURDEN THAT ARE DERIVED FROM THE OVERALL ENVIRONMENTAL IMPRINT. CARBON FOOTPRINT CALCULATION IN ACCORDANCE WITH ISO 14064 AND GHG PROTOCOL STANDARDS AND PRINCIPLES.

REFERENCE YEAR

RESULT

t CO₂ eq.

DIRECT EMISSIONS TO AIR | **139.5** | **5.9%**

Emissions from activities which fall under a particular company (e.g. emissions from furnaces in the company, company cars or emissions from industrial processes)

t CO₂ eq.

INDIRECT EMISSIONS FROM PURCHASED ENERGY | **600.3** | **25.3%**

Emissions which are not created directly in the company, but are the result of the company activities (e.g. purchase of electricity, heat or steam)

t CO₂ eq.

OTHER INDIRECT EMISSIONS | **1,630.6** | **68.8%**

Emissions which result from activities of the company but are not classified as "indirect emissions from purchased energy" (e.g. business trips by air, landfill of waste, etc.).

The carbon Footprint (CF) of Rondo AG (2017 data) is dominated by a large portion of Scope 3 emissions (69%). 57% of the total CF is made up by cardboard, as one of the main raw materials (input) for this packaging producing company. Electricity consumption (25%) and printing plates (10%) also constitute important sections of the overall CF. In the period of 2013-2017, there was a decrease in total greenhouse gas emissions (Scope 1, 2 and 3) by 54%. Compulsorily reportable emissions (Scope 1 and Scope 2) increased by 289%. Emissions of Scope 1 and Scope 2 relative to output (number of products) increased by 813% and emission of Scope 1, 2 and 3 relative to output (number of product) increased by 6%. In the period 2013-2017, the emissions from the electricity consumed were calculated differently, therefore the data are not comparable. In particular due to using of marked-based method for calculation of consumption of the electricity for year 2017.
